The theme of this garden emphasises cool-climate plants from around the world, especially those from the southern hemisphere.

The Mount Tomah garden is one of the few botanic gardens where plants have been grouped according to their geographical origin. This allows the visitor to see both the similarities and differences between the plants of each region, and thus to learn something of the evolution of the floras of the different continents.

Feature gardens include:

- Southern Hemisphere Woodland
- Proteaceae garden
